Author: Anshul Mathew

Application scope

Application description:

This application was developed as a Homepage of Anshul Mathew. It is not a standard homepage, in the sense it was developed in a way to feel like the www.google.com page. Considering the idea that it is a highly visited page, I have developed my homepage with a similar look and feel.

Users - Target audience:

The target audience is as follows:

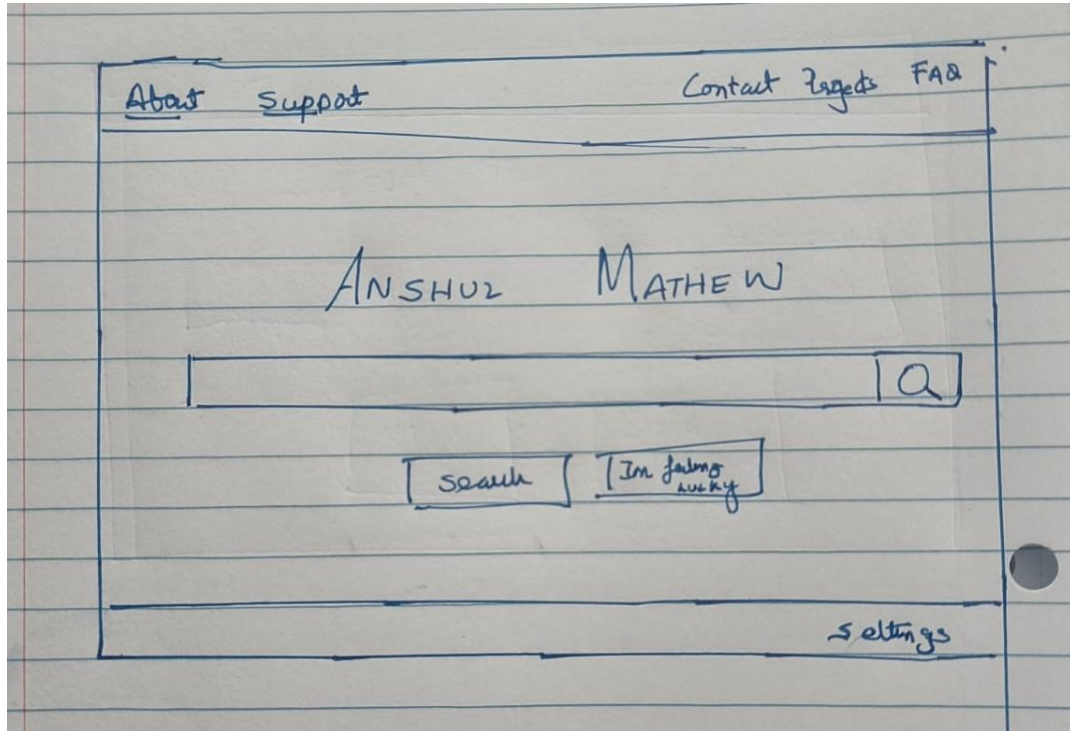

- Employers:
 - Potential employers can use this as a source of truth for my work, my contact info and some basic information about me.
- Friends and Family:
 - My friends and family will always have an updated record of all my contact details and ways they can support me. I would also reach out to them for suggestions on improvements to my homepage and their feedback will be recorded in the FAQ section of the website.
- Professors:
 - Professors can access the different areas I have worked in and my research interests from my page.

User stories

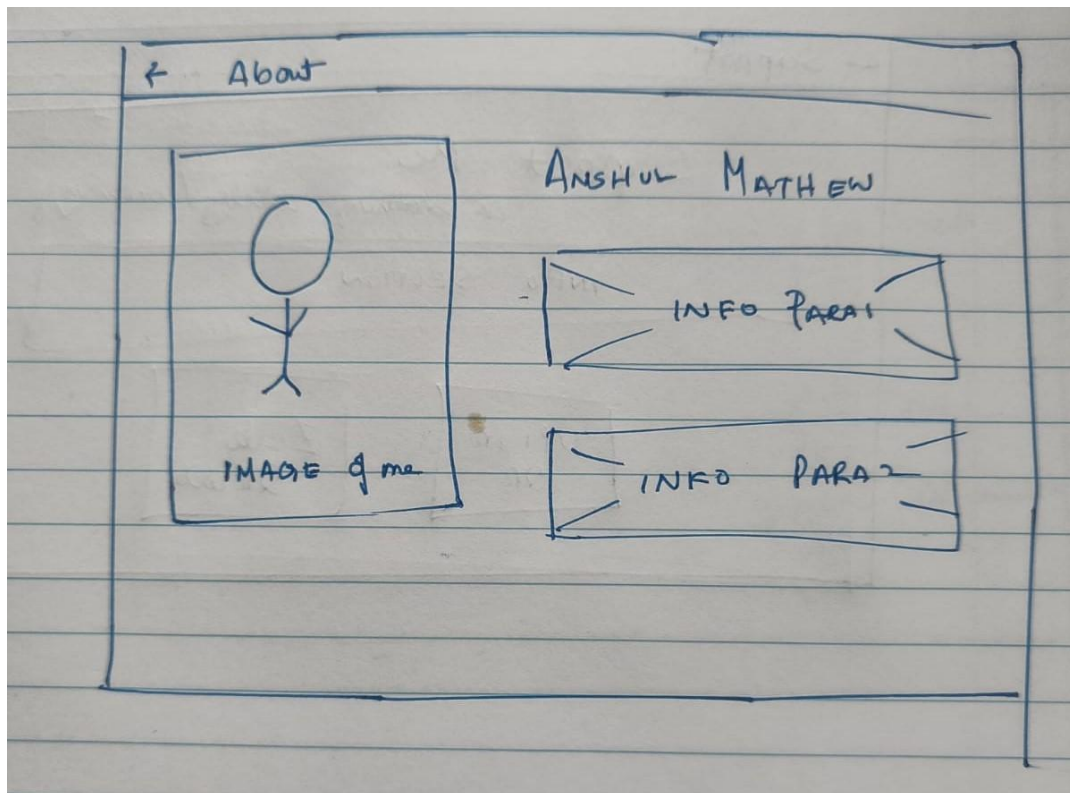

1. Sayali, a job recruiter for a big tech company, would like to know what is his previous experience in the workforce and can gather this information by visiting the projects page on the website and subsequently contact him from his contact page.
2. Vyshaali, a potential customer, requires web services and has an interesting proposal realizes that anshul is intrigued on working on unique and challenging project can learn that about Anshul from his about page
3. Harsha, a wealthy businessman, wants to support his friend anshul who is struggling to pay for his master's education and realizes that he can send money via upi or zelle from the support page
4. An angry twitter user, would like to express his dissent and so uses the information provided under the social media tab of the contact page to start a twitter war.
